

Check out our Model PWI API 610 Vertical In-Line Single Stage OH4 by the numbers!

1 Quality

- Manufactured and tested in the USA

2 Coupling

- Radially split spacer coupling allows mechanical seal to be removed without disturbing the driver

3 Casing Cover and Seal Chamber

- API 610 seal chamber allows user to install any API 682 cartridge seal to meet process requirements
- Renewable throat bushing for controlled seal chamber environment
- Flat surface seal gland for O-Ring sealing
- Optional machined gasket area for higher temperature applications or on customers request

4 Renewable Casing and Impeller Wear Rings

- Front and back rings control seal chamber pressure and provides impeller stability
- Optional non-metallic rings for improved efficiency and dry running

5 Impeller Retention

- Keyed and secured to shaft with exclusive dual set-screw locknut

6 Impeller

- Fully enclosed design provides increased efficiency
- Dynamically balanced to ISO G1.0 criteria before mounting

7 ePOD Pump Selector

- Access to end users and specifiers to select, configure and estimate their pump application on line at www.pumpworks610.com

8 Delivery

- 16 weeks for API 610 material class S-6, S-8, and C-6
- Refer to the factory on deliveries for other API material classes and customer specific material combinations

9 Driver

- Readily available standard "P" base motor to accommodate pump thrust

10 Driver Stand

- Motor positioning lugs with bolts to facilitate alignment
- Two stands cover the entire pump size range
- Generous window access allows for easy seal maintenance.

11 Throat Bushing

- Graphalloy Throat Bushing
- Non-galling, superior wear resistance
- Allows for tight running clearances to minimize shaft runout

12 Nozzle Load

- Casing design meets current edition API 610 Nozzle Load requirement

13 Pump Casing

- Precision machining and fully confined controlled compression gasket ensures proper sealing and case to cover alignment
- ANSI 300# Class RF Flange standard, hydro test pressure 1100 psig

14 Casing

- Designed for use with or without a mounting plate

Do the math - it equals superior performance, highest quality and the fastest delivery!

DO THE MATH!

The PumpWorks 610 Difference

- Manufactured and tested in the United States
- Access for end users and specifiers to select, configure and estimate their pump application on line at www.pumpworks610.com.

PWH API 610 Process Pump

PWH is the PumpWorks 610 API 610 current edition over process pump S-6, S-8, C-6 and A-8. Other materials combinations are available. The pumps are built, assembled and performance tested in full compliance with API 610 in Tyler, Texas USA.

- Shorter lead times than the competition – 16 weeks for API 610 Material Classes S-6, S-8 and C-6

See our *PWH API 610 Single Stage OH2 Brochure* for more information.

PW-11 API 610 Upgrade Program

PW-11 is the PumpWorks 610 retro upgrade kit that meets API 610 current edition for horizontal single stage OH2 process pumps. The kit ensures petroleum refineries have a fast and effective way to upgrade any brand of existing OH2 process pump and achieve API 610 current edition requirements without expensive changes to the wet end (casing and impeller) and piping.

See our *PW-11 API 610 Upgrade Program Brochure* for more information.

PWM API 610 Multistage Pump

PWM pump is designed for coverage of High Pressure petroleum services, petrochemical plant ser gas processing, oil processing, offshore installations (platforms), hydrocarbon and crude oil pipeline and finished products pipeline s

- Shorter lead times than the competition – 26 weeks for API 610 material class S-1, S-4, S-5, S-8 and A-8

See our *PumpWorks 610 Multistage Pump Brochure* for more information.

PWV API 610 Vertical Turbine Pump

PWV is the PumpWorks 610 API 610 current edition VS6 and VS1 vertical turbine pump in API 610 material classes S-1, S-4, S-5, S-8 and A-8. Other material combinations are available. The pumps are built, assembled and performance tested in full compliance with API 610 in Tyler, Texas USA.

- Shorter lead times than the competition – 16 weeks in API 610 Material Class S-1

See our *PWV API 610 Vertical Turbine VS6 (Can Type) VS1 (Sump Type) Brochure* for more information.

API 610 Vertical In-Line Single Stage OH4

VI is an API rigid coupled vertical in-line pump designed to cover a wide range of applications in petroleum processing facilities, gas processing, petrochemical, offshore installations (platforms), hydrocarbon and crude oil pipeline and aviation (jet) fueling applications.

- Shorter lead times than the competition – 16 weeks for API 610 material class S-6, S-8 and C-6

See our *PW-11 API 610 Vertical In-Line Single Stage OH4 Brochure* for more information.

API 610 Vertical In-Line Pump Selection ePOD

Visit our website at www.pumpworks610.com to specify flow and performance needs to obtain pump selection, performance curve, data sheet and budget estimate through ePOD software pump selection program.

Test Facilities Horizontal and Vertical Pumps

The primary function of any pump manufacturer is the performance testing of their product across the pump's operating region to ensure that it meets design specifications. The PumpWorks 610 Pump Test Facilities in Tyler, Texas USA and in Shreveport, Louisiana USA are designed to perform performance and NPSHR tests in accordance with the latest edition of API 610.

Facilities Capabilities:

- Test flows up to 15,000 gpm
- Discharge test pressures up to 6000 psi
- Variable frequency drive for precise speed control through 600 HP @ 460 volt
- Solid state soft start for low impact motor starting over 600 HP through 4000 HP @ 4160 volt

See our *PumpWorks 610 Test Facilities Brochure* for more information.
